OFFICIAL THEME USER GUIDE

uniQ

Simple Creative Theme – Responsive HTML5

designova™

GREETINGS FROM DESIGNOVA

Thank You For Purchasing Our Product.

If you like this theme, we really need your support,
So kindly **tweet** or **comment** on market place.

Important - FAQ:

1) What is this User Guide for ?

This user manual is under the scope of ordinary users in order to setup their static website using this HTML5 theme. If you are looking for advanced customization please note that you need to familiarize the relevant technologies used to build this theme.

2) How to use this HTML5 theme?

This theme is purely HTML template used to create a static website. This theme is not compatible with WordPress, Weebly or FrontPage systems. If you are looking for WordPress themes please visit our market place portfolio and check themes with title as "WordPress".

3) "Stylesheet missing" error. Why?

As we have already mentioned on market place page, this is HTML5 template and not a WordPress theme. But if you try to install this theme on any WordPress system then the above stated error occurs. There is nothing can be done about this rather than purchasing a WordPress version (if available) .

4) How to get theme updates and future versions?

We regularly release updates and bug fixes on our themes and we send notifications via newsletters. You may subscribe to our weekly newsletter by visiting the following link: http://eepurl.com/xDO_v

We also use Twitter to announce it to our customers. Please follow us @designovastudio

5) How to get support on this theme?

This user manual covers everything you need to setup the website. But if you find any bugs, issues and limitations on this theme please contact our support team via email to: info@designova.net. When you send a support request email you must include the purchase code and purchase date of the product (received from Market place website). Support request emails without these information will not be answered. Also give us 24 to 48 hours turn around time to get back to you – we are a small team, but we will surely make a response as soon as we are free.

6) Support v/s Theme Customization?

When we offer free support, we are always here to help you when bugs and issues are reported on our themes and we will not charge anything for this service as we are committed to give our level best on our premium products.

But this free help does NOT mean to be any free customization or modification of our themes. We are a small team and we are not available for any free customization services at the moment. But if you like you can opt for premium theme customization services, kindly let us know via email to: info@designova.net. If our developers are available we will get back to you with a nice plan and schedule

Theme Information

Being a premium HTML5 template, Uniq is a highly minimal, clean and simple theme with fully responsive layout built using Bootstrap framework version 2.3. Uniq is very easy to use, you can can build the website within few minutes, no more complex modules or advanced plugin setup is is needed. It is simple and straight forward.

This theme features Single Page Scroll-Down layout with responsive layout. Uniq comes with a completely editable layout with the power of Bootstrap framework. This can make it extremely easy for ordinary users to setup their own website. But it is also possible to extend the template to any level as your creative freedom. This template includes w3 valid cross browser compatible HTML5 markup.

Main Features

- **Very clean and minimal theme with a ultra-nice design** - a creative theme best suitable for creative agency / individual portfolios and for innovative business showcase.
- **Simple and easy to use** - The first focus of this theme is the usability and simplicity. Users can create a site within a few minutes, that's pretty easy!
- **Perfectly responsive** across all devices including iOS mobile devices, android and windows phone platforms.
- **Built with Bootstrap 2.3.0** – World's best Responsive Front-end Framework. Most easy to use and customize.
- **ISOTOPE** (Premium Plugin Worth USD 15) Powered **Filterable Portfolio** / Gallery with Lightbox.
- **Full Screen BG Image Slideshow** – Image slideshow on the background of the page.

- **Project Info + Images Slider inside Lightbox via AJAX** – the best way to showcase your project information and images at the same time.
- **Testimonials Slider –** a very usable content slider that supports any HTML5 content.
- **Image / Content Sliders, Carousels, Nivo Slider etc.**
- Also includes **all UI patterns** from Bootstrap.
- Precisely hand-coded HTML5 template with w3 valid cross-browser compatible markup.
- **Working contact form** with validations and **PHP Email sender**

Our awesome support team is always available to help you on bugs and issues related with our themes.

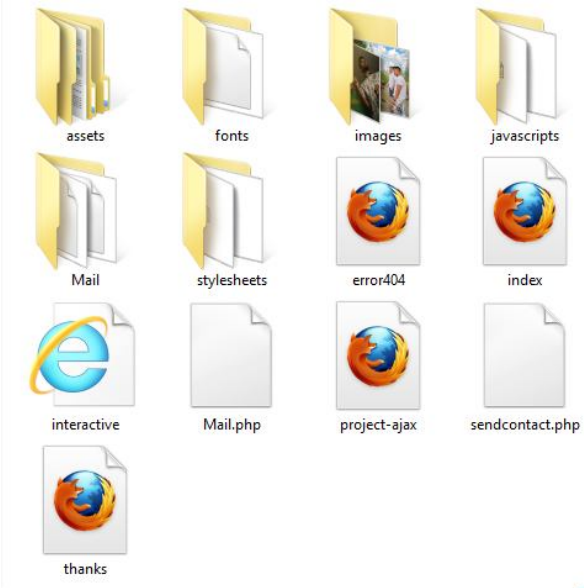
Chapter 2

Files Included

Uniq includes a clean and clearly defined file structure so that our users can easily understand the hierarchy of theme assets. This will make it easy to edit the theme and customize it (for experienced users).

Kindly find the directory structure explained with screenshot given below:

Directory Structure



FOLDER / FILE NAME	DESCRIPTION	WHAT TO DO
assets	Contains files for Bootstrap framework along with some re-usable extensions	Just replace the inner files if you need to manually upgrade to a newer version of Bootstrap
images	Contains all image resources used in this theme	Please replace placeholder images with your own images, don't forget to keep exact dimensions and format as original placeholders
javascripts	Contains all JS / jQuery library files used in this theme	Edit / Replace only if you are familiar with JS / jQuery codes
mail	Contains resources for PHP email sender	Please DO NOT modify unless you know exactly what you are doing
stylesheets	Contains all CSS files used within this theme. This includes CSS files specific to plugins and modules used in this theme	Modify only STYLE.CSS for changing the look and feel of theme. If you are unsure about other CSS files please keep them unchanged.
Error404.html	File for "Page Not Found" cases – Error Page	Keep this file exactly on same location as it is. You can change the name if it is required by your web hosting provider.
Index.html	Main web page / home page	Keep this file exactly on same location as it is. DO NOT change the name.
Mail.php	Mail sending PHP module	Keep it on place. DO NOT modify

Sendcontact.php	Email sender configuration PHP script	You have to change some values in this file; this will be explained on following section within this guide.
Project-ajax.html	Web page to show a single project (shown inside lightbox via AJAX only).	Use this as a template to display separate project information. Clone this and build as many pages as your projects are. You have to manually rename and link them from portfolio module. This will be explained on following section within this guide.
Thanks.html	Web page displayed as a response after sending the contact form message via home page.	Feel free to edit the contents. DO NOT change the name of this file.

Chapter

3

Template Layout and UI Framework

Uniq is a single page website with scroll-down sections which stands for 'pages' inside this theme. So you have different sections on a one-page, you can easily add/remove sections as needed. Kindly follow the guidelines given below:

1. Template Layout Setup:

Setting Up Navigation:

As a one page template, Uniq has navigation which is a collection of "click to scroll" links. We use jQuery to scroll down to various sections (pages) inside the same file (index.html). Please see the markup corresponding to Main Navigation, given below (refer Index.html – Line 137):

```
137                     <!-- Desktop Navigation-->
138                     <nav id="navigation" class="visible-desktop">
139
140                         <ul class="hidden-tablet hidden-mobile pull-right">
141                             <li class="links">
142                                 <a id="intro-linker" href="#intro">home</a>
143                             </li>
144                             <li class="links">
145                                 <a id="portfolio-linker" href="#portfolio">what we do</a>
146                             </li>
147                             <li class="links">
148                                 <a id="about-linker" href="#about">who we are</a>
149                             </li>
150                             <li class="links">
151                                 <a id="quote-linker" href="#quote">let's work</a>
152                             </li>
153                             <li class="links">
154                                 <a id="contact-linker" href="#contact">reach to us</a>
155                             </li>
156                             <li class="links">
157                                 <a class="btn btn-uniq-small" href="#quote">hire us</a>
158                             </li>
159                         </ul>
160                     </nav>
161                     <!--/Navigation-->
```

Here the ANCHOR tag (<a>) holds an HREF attribute which contains the target (ID) of the section. When user clicks on this anchor tag, the page will be scrolled down to that section.

```
<li class="links">
<a id="about-linker" href="#about">who we are</a>
</li>
```

When clicked on this link, page will be scrolled down to:

```
<section id="about" class="page clearfix">
```

So, there is an image contained in the anchor tag which acts as the icon of this navigation item as you see on the theme. Also there is a tooltip displayed on left side of this icon which holds the value of title="About"

Setting Up Mobile Only Navigation:

In this theme we are introducing a new style of mobile navigation which is Sidr Navigation.
We have used this plugin build this awesome sliding navigation panel: https://github.com/artberri/sidr

This mobile navigation is simple to edit and use, just follow the markup given below and it is self-explaining stuff.

```
53      <div id="sidr">
54          <!-- Your content -->
55          <ul>
56              <li class="links"><a href="#intro">intro</a></li>
57              <li class="links"><a href="#portfolio">what we do</a></li>
58              <li class="links"><a href="#about">who we are</a></li>
59              <li class="links"><a href="#quote">let's work</a></li>
60              <li class="links"><a href="#contact">reach to us</a></li>
61              <li class="links"><a href="#quote">hire us</a></li>
62          </ul>
63
64      </div>
```

Setting up a section / page:

A section / page are a markup region contained within an HTML5 SECTION tag, example as given below:

```
419  <section id="about" class="band page bg-grey">
420
421
422
423      <section class="container-fluid">
424      <div class="row-fluid">
425          <section class="container">
426
427              <div class="welcome row">
```

```
515          </section><!--/ container-->
516      </div><!--/ row-fluid-->
517      </section><!--/ container-->
518
519
520  </section><!--/ band-->
```

We use the above region to wrap up each section and inside this region we build other elements using Bootstrap framework's native arrangements via HTML5 markup. So, you have to understand how to create elements using Bootstrap, please read on.

2. Bootstrap Framework Setup:

Uniq is completely built with Bootstrap 2.3.0 responsive framework which is the best front-end development framework available at present. It is very easy to edit the layout as well as for making any advanced customization. Kindly note, you have to familiarize Bootstrap's native arrangements (it is easy) and short codes before you proceed.

Bootstrap's grid system

The default Bootstrap grid system utilizes **12 columns**, making for a 940px wide container without responsive features enabled. With the responsive CSS file added, the grid adapts to be 724px and 1170px wide depending on your viewport. Below 767px viewports, the columns become fluid and stack vertically.

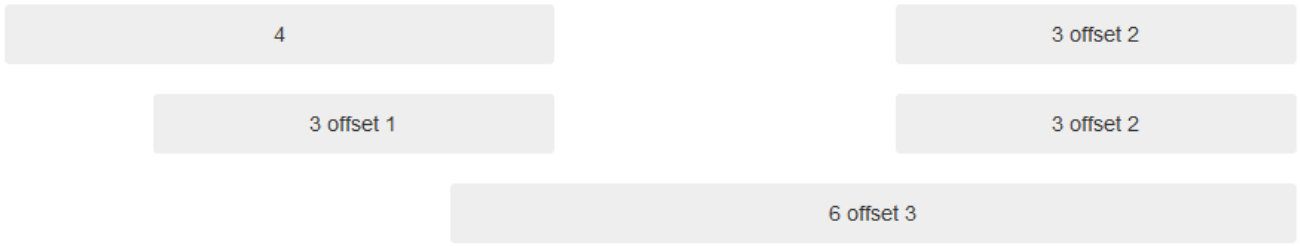
Setting up the grid – HTML

For a simple two column layout, create a .row and add the appropriate number of .span* columns. As this is a 12-column grid, each .span* spans a number of those 12 columns, and should always add up to 12 for each row (or the number of columns in the parent). Please see the markup:

```
1.  <div class="row">
2.    <div class="span4">...</div>
3.    <div class="span8">...</div>
4.  </div>
```

Offsetting columns

Move columns to the right using .offset* classes. Each class increases the left margin of a column by a whole column. For example, .offset4 moves .span4 over four columns.



```
1.  <div class="row">
2.    <div class="span4">...</div>
3.    <div class="span3 offset2">...</div>
4.  </div>
```

We are having page limitation to explain everything about Bootstrap here. So for more information we refer to original documentation for Bootstrap, found here:

http://twitter.github.com/bootstrap/scaffolding.html

Upgrading Bootstrap on Future:

As Web is always changing day by day, we would like to keep our themes expandable and adaptable to innovations. We have kept all assets and files related to Bootstrap framework on a separate folder called ASSETS found on the following location:

[THEME'S ROOT FOLDER]/**assets**

Please replace the following files contained in this 'ASSETS' folder with your new files coming from Bootstrap's download ZIP pack. You can see exactly the same folders there. Replace the inner files exactly as it is.

[THEME'S ROOT FOLDER]/assets/**img**
[THEME'S ROOT FOLDER]/assets/**css**
[THEME'S ROOT FOLDER]/assets/**js**
[THEME'S ROOT FOLDER]/assets/**ico**

Chapter

4

Theme Styling and Skinning

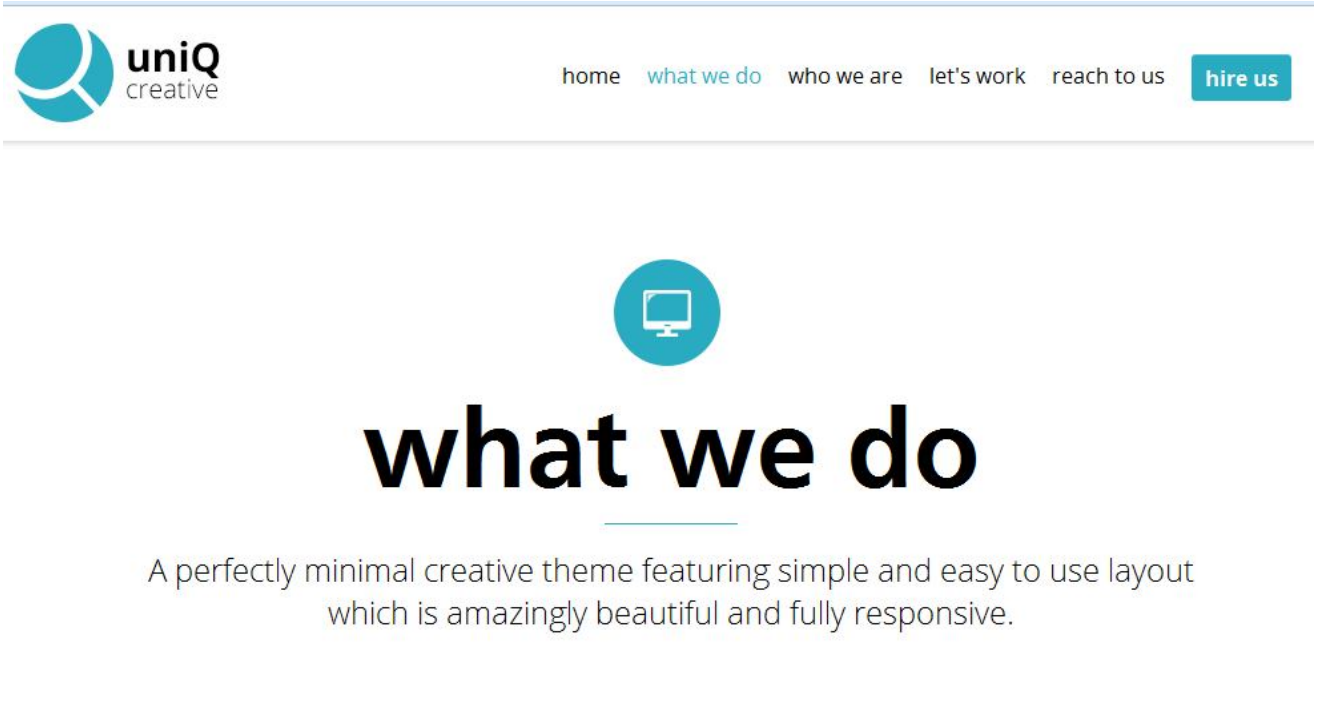
Uniq is completely styled majorly with a single CSS file that contains all the style rules for this theme.
Please see the following file:
[THEME'S ROOT FOLDER]/stylesheets/**style.css**

Feel free to modify / change the rules stated in this CSS file. You better have a basic understanding of CSS.

Changing Color Scheme:

You can see the whole skin of this theme under the following file:

[THEME'S ROOT FOLDER]/stylesheets/**style.css**
In order to change the accent color of this theme (default is Blue) all you have to do is to replace all values supplied as "#29ABC1" to any other color value (in whole CSS file you have to do this). This will change the color of this theme from default Blue to your preferred color.



You can also change many other styling parameters such as font style, font size, spacing and alignment etc.

Chapter

5

Fonts and Typography

Fonts Directory and Declaration

We have used CSS3 Font-Face technology to render fonts in this template. We have defined all font rules via the following CSS file:

[ROOT FOLDER]/assets/css/**typography.css**

And we have included all font resource files inside the following folder:

[ROOT FOLDER]/assets/css/**fonts**

Setting Up Font-Face Rules

An example usage of Font-Face is defined as follows:

```
@font-face {
        font-family: 'MyFontFamily';

        src: url('fonts/mywebfont.eot');
        /* IE9 Compat Modes */

        src: url('fonts/mywebfont.eot?#iefix') format('embedded-opentype'),
        /* IE6-IE8 */

                url('fonts/mywebfont.woff') format('woff'),
                /* Modern Browsers */

                url('fonts/mywebfont.ttf')  format('truetype'),
                /* Safari, Android, iOS */

                url('fonts/mywebfont.svg#svgFontName') format('svg');
                /* Legacy iOS */
        }
```

Now apply the font to any element via CSS rule targeting that element, for example if the element is #something, then we can apply the above declared font as:

```
#something {
	font-family: 'MyFontFamily', Fallback, sans-serif;
}
```

Typography Arrangements:

We have used H1 tag for Main Heading and H3 tag for Sub Headings. We have kept separate style rules for all typographical elements via a single stylesheet:

[ROOT FOLDER]/stylesheets/**style.css**

Chapter

6

Parallax Engine and Operations

Introduction

The parallax engine is powered by SKROLLR - AStand-alone **parallax scrolling** lib for **mobile (Android + iOS) and desktop** in just over **3.8k** (minified + gzipped) for desktop. And another 6.5k for **mobile support** (which is optional).

Designer friendly. No JavaScript skills needed. Just plain CSS.

*Actually, skrollr is much more than "just" **parallax scrolling**. It's a full-fledged scrolling animation library. In fact, you can use it and still have no parallax scrolling at all. But I wanted to sound hip and use some buzz-words. By the way, skrollr leverages HTML5 and CSS3 ;-)*

Skrollr - Main Files:

Files you should know about

- ***javascripts/skrollr.min.js*** - The skrollr core file. That's all you need for modern desktop browsers.
- ***javascripts /skrollr.ie.min.js*** - For IE < 9, include it after the core using conditional comments. The plugin makes IE understand opacity, rgb() and hsl() (the ones with alpha are mapped to them) and it creates a very simple document.querySelector polyfill which only supports ID selectores (using getElementById). Needed if you want to use data-anchor-target.
- ***javascripts /skrollr.mobile.min.js*** - Includes iScroll and a bridge script which initializes iScroll and makes it work with skrollr. Include it after the core when you need mobile support.

How to setup Skrollr Parallax & Animations?

skrollr allows you to animate any CSS property of any element depending on the horizontal scrollbar position. The horizontal scroll bar position (we say, Scroll Index value) of any element can be easily found with the help of a jQuery plugin, we have included this as “helper plugin

Please see the following:

When you scroll the site, you will get scroll position of the scroll bar on any element and you have to copy this value. Now all you need to do is define key frames for each element at certain points in top scroll offset by supplying this Scroll Index value as well as the animation CSS rule as explained in the Operation Examples given in the next section.

Note: We have disabled this Helper Plugin on uniQ preview of our theme, but we have enabled it on downloadable theme pack. Once you have done all editing of your site, you can disable it by removing / commenting the following element:

```
862   <div class="scrollpos-status">
863   </div>
```

Operation Examples:

If you're familiar with CSS, you already know the style attribute. In order to create an animation you would need several, at least two, of them. That's what skrollr does. You use the HTML5 data-attributes to define multiple sets of styles (we call each of them keyframe**) and skrollr interpolates between them.**

#1

Let's change the background-color of a div starting at #00f when the scrollbar is at the top and ending with #f00 when the user scrolled 500 pixels down

WOOOT

View this example:
http://prinzhorn.github.com/skrollr/examples/docu/1.html

#2

Now let's do a barrel roll at the same time

WOOOT

View this example:

http://prinzhorn.github.com/skrollr/examples/docu/2.html

#3

Now let the rotation bounce like it were a hip-hop video

WOOOT

View this example:
http://prinzhorn.github.com/skrollr/examples/docu/3.html

Turning Off / On the parallax (Global Setup):

The parallax engine is user-controllable in a way that you can manually turn off / turn on the parallax effect on various scenarios such as:

1) Only on all Mobile Devices

2) On all Browsers and Non-Mobile Devices

In order to make this happen kindly see the following code from **INDEX.HTML**:

```
877  //Suspend skrollr on mobile devices
878  //(You can uncomment the below line to activate parallax effect on supported mobiles).
879  // document.write('<script type="text/javascript" src="javascripts/skrollr.mobile.min.js"><\/script>');
880  document.write('<link href="stylesheets/mobile-hook.css" rel="stylesheet">');
881  }
882
883  else{
884  //Activating skrollr only on non-mobile (bigger) devices.
885  //(You can comment the below line to disable parallax effect on all devices and browsers).
886  document.write('<script type="text/javascript" src="javascripts/skrollr.min.js"><\/script>');
887  }
888  })(navigator.userAgent||navigator.vendor||window.opera);
```

In the above code segment, if you want to activate parallax effect on all (supported) mobile devices please activate (uncomment) the line 880.

If you want to deactivate total parallax effect on all browsers then deactivate (comment) line 886.

If you want to deactivate total parallax effect on all mobile devices as well as desktop browsers please deactivate line 879 and activate line 886.

So, the default setup (what is shown on the above code preview) is that the parallax effect activated on non-mobile devices.

Stylesheet Hook:

The parallax engine when disable on mobile devices, can access a particular stylesheet which contains style rules needed only for such mobile devices. This CSS file can be found here:

[THEME'S ROOT FOLDER]/stylesheets/**mobile-hook.css**

Mobile Device Support:

Please note that the rendering of advanced scripts and heavey parallax layers may cause it have any lag on some mobile devices – Smoothscrolling effects may not be experienced. But reloading will make it cache the assets and make it improved.

Technically speaking, this Skrollr Parallax Scrolling is properly working on iOS mobile devices with the help of iScroll jQuery hook which is integrated within this parallax library. This will over-ride the native scrolling limitations of iOS mobile hence the layout will work properly on such devices.

For more info please find this: https://github.com/Prinzhorn/skrollr#mobile-support

Extended Usage and Possibilities:

In the previous session we have covered the basic usage examples for setting / editing the parallax via Skrollr engine. There is more stuffs possible within this library which will help you to build amazing websites if used wisely and precisely. In this basic user guide we are not having enough room to cover all these information.

So kindly refer original documentation of the plugin from here: https://github.com/Prinzhorn/skrollr

Chapter

7

Featured Modules and Markup

1) Full Screen Slider Page Background

We have arranged a full screen slider which showcases any images along with content which you may have to display on your website. In order to make things pretty nice we have kept this as page background itself.

This nice module is powered by jQuery Backstretch plugin.

The BG images are supplied using JS only. No markup is needed / created on the static page. A script for initialization of this plugin is shown below. Please see the source code screenshot given below (index.html):

```
804  <!-- Full Screen Background Images are defined via JS here: -->
805      <script>
806          $.backstretch([
807            "images/bg1.jpg",
808            "images/bg2.jpg",
809            "images/bg3.jpg"
810          ], {
811              fade: 3000,
812              duration: 4000
813          });
814      </script>
```

images/bg.jpg = first image shown on the slider
images/bg1.jpg = second image shown on the slider and so on.

Backstretch plugin is extremely powerful carousel plugin which has a wide variety of options. You can refer original documentation of the plugin to see more possibilities:

http://srobbin.com/jquery-plugins/backstretch/

2) Globe – Vertical Text Slider

We have a simple but useful text slider. Even if we call it as text slider you can use it to display any HTML5 elements as permitted by the design's scope.

```
91                      <div class="rot-word-wrapper">
92                          <div class="rotatingWords">
93                              <div data-globe="globe-01">Web Design</div>
94                              <div data-globe="globe-02">Interfaces</div>
95                              <div data-globe="globe-03">Typography</div>
96                              <div data-globe="globe-04">Graphics</div>
97                              <div data-globe="globe-05">Print Design</div>
98                          </div>
99                      </div>
```

A custom JS is used to build this module. This module is very easy to use and we have kept this within a common JS file:

[ROOT FOLDER]/javascripts/**script.js**

A script for initialization of this plugin is shown below:

```
//Rotating Words on HEADER

var current = 1;
var height = $('.rotatingWords').height();
var numberDivs = $('.rotatingWords').children().length;
var first = $('.rotatingWords div:nth-child(1)');
setInterval(function() {
    var number = current * -height;
    first.css('margin-top', number + 'px');
    if (current === numberDivs) {
        first.css('margin-top', '0px');
        current = 1;
    } else {current++;}
}, 2000);
```

3) Filterable Portfolio / Gallery (ISOTOPE) with Lightbox

We have a stunning and premium portfolio module within this theme which is powered by an amazing jQuery plugin known as ISOTOPE. This is a premium plugin worth USD 15.

This filterable portfolio / gallery section includes a stunning filterable animated gallery built with grid based blocks. Each of these block are linked with separate categories and these categories can be triggered via categories filters.

FILTERS:

Filters are organized as <li> items in the first list as shown below:

```
<section id="options" class="clearfix">
    <ul id="filters" class="option-set clearfix" data-option-key="filter">
    <li class="inner-link"><a href="#filter" data-option-value="*" class="selected">all</a></li>
    <li class="inner-link"><a href="#filter" data-option-value=".branding">branding</a></li>
    <li class="inner-link"><a href="#filter" data-option-value=".web">web</a></li>
    <li class="inner-link"><a href="#filter" data-option-value=".ecommerce">ecommerce</a></li>
    <li class="inner-link"><a href="#filter" data-option-value=".print">print</a></li>
    <li class="inner-link"><a href="#filter" data-option-value=".digital">digital</a></li>
    <li class="inner-link"><a href="#filter" data-option-value=".modern">modern</a></li>
    <li class="inner-link"><a href="#filter" data-option-value=".creative">creative</a></li>
    <li class="inner-link"><a href="#filter" data-option-value=".modern, .creative">modern and
    creative</a></li>
    <li class="inner-link"><a href="#filter" data-option-value=":not(.web)">All, not including
    web</a></li>
    </ul>
</section> <!-- #options -->
```

Note that each filter item is having the following markup:

```
<a href="#" data-option-value=".category1">Design</a>
```

Here the DATA-FILTER holds the value which is the CLASS NAME FOR A PARTICULAR CATEGORY block inside the gallery. When user clicks on this filter item, the gallery item blocks having only that class name will be show via an animation.

GALLERY / PORTFOLIO ITEM BLOCKS:

And on the second portion, each holds portfolio item which can be triggered via categories assigned as CLASS values as shown above. Just replace these values as you like, please keep the exact value combinations on HREF attribute of filter items also.

```
225         <div class="element web height-02 folio-item">
226             <img title="Uniq" alt="Uniq" src="images/portfolio/p01.jpg"/>
227             <a href="images/portfolio/full/dummy.jpg" class="zoom-info" title="Project Title"><div class="
                icon-zoom-sosa folio-trigger-icon"></div></a>
228             <a href="project-ajax.html" target="_blank" class="zoom-info" title="Project Title"><div class="
                icon-link-sosa folio-trigger-icon"></div></a>
229             <h5 class="folio-subtitle titles">Caption</h5>
230         </div>
```

For more information please refer the original preview along with demonstrations shown on plugin's source page

http://isotope.metafizzy.co/

The plugin in invoked inside:
[ROOT FOLDER]/javascripts/**script.js**

All the images contained in this module are located inside:
[ROOT FOLDER]/images/**portfolio**

LIGHTBOX TYPE 1:

PROJECT VIEW INSIDE LIGHTBOX:

Each portfolio item when clicked, displays lightbox containing a larger image or project information which can also include an image slider within the lightbox. This lightbox is implemented with ColorBox plugin. The location of files to be opened in this lightbox is given via:

```
<a href="project-ajax.html" target="_blank" class="zoom-info"
title="Project Title"><div class="icon-link-sosa folio-trigger-
icon"></div></a>
```

when clicking on this link to trigger lightbox for this item. Here we have href="`project-ajax.html`" attribute which is the name of project page to be loaded into the lightbox when clilcked. This loading is performed via AJAX via jQuery.

IMPORTANT:
In order to showcase more projects via lightbox please do the following:

1) Clone the file `project-ajax.html`
2) Rename it to something else
3) Now link this new file to any portfolio block (explained above) and on clicking this portfolio item the AJAX is loading the content from this newly linked file.
4) Repeat the same procedure for all project blocks / project pages.

Image Slider inside Project View Lightbox:

We have a nice image slider inside the Lightbox which act as project image slider. You can see these images in the following location:

[ROOT FOLDER]/images/projects/project1/**01.jpg**
These images are declared inside each and evey project page (AJAX feed), as shown below:
[ROOT FOLDER]/ **project-ajax.html**

```
<div class="flexslider clearfix">

    <ul class="slides">
        <li>
            <img title="designova" alt="reva" src="images/projects/project1/01.jpg" />
        </li>
        <li>
            <img title="designova" alt="reva" src="images/projects/project1/02.jpg" />
        </li>
        <li>
            <img title="designova" alt="reva" src="images/projects/project1/03.jpg" />
        </li>
    </ul>

</div>
```

This plugin is FLEX Slider which has more options which can be found here.
http://www.woothemes.com/flexslider/

LIGHTBOX TYPE 2 :

BIG IMAGE INSIDE LIGHTBOX:

Each portfolio item when clicked, can also show a single Big image. This lightbox is implemented with PrettyPhoto plugin. The location of files to be opened in this lightbox is given via:

```
<a href="images/portfolio/full/dummy.jpg" class="zoom-info" title="Project Title"><div class="icon-zoom-sosa folio-trigger-icon"></div></a>
```

when clicking on this link to trigger lightbox for this item. Here we have href=" `images/portfolio/full/dummy.jpg` " attribute which is the name of Single Image to be loaded into the lightbox when clilcked..

Fore more settings on this lightbox plugin please visit http://jacklmoore.com/colorbox

4) Contact Form Configuration

The template is featuring a fully working contact form with PHP mail sending ready. We have kept everything ready, you have to only provide your own email id instead of the predefined demo email id. This can be done by simply modifying the email id, as shown in the SENDCONTACT.PHP file, located in root directory.

[ROOT FOLDER]/**sendcontact.php**

Setting Up Email Credentials

Open this file via a code editor / text editor and now go to the code segment: Line 4 to 6.
Please see the screenshot:

```
3  // Define some constants
4  define( "RECIPIENT_NAME", "John Doe" ); //UPDATE THIS TO YOUR NAME
5  define( "RECIPIENT_EMAIL", "john@example.com" ); //UPDATE THIS TO YOUR EMAIL ID
6  define( "EMAIL_SUBJECT", "Website Visitor Message" ); //UPDATE THIS TO YOUR SUBJECT
```

The value "***john@example.com***" should be replaced with your own email so that the emails will be sending to this email id. The value inside 'subject' should be changed to something meaningful since this will be displayed as the subject of the email message send via the contact form. That's all for basic setup.

All PHP mail sending library files and server scripts are stored in MAIL folder in the root. For advanced users who need in-depth customizations, the PHP script can be modified appropriately. The PHP file is 'processForm.php' and it is located in the root folder.

5) Nivo Slider

The template is featuring an awesome, utility content (and image) slider called Nivo Slider, this is a simple plugin to setup:

```
437                 <div class="slider-wrapper theme-light">
438                     <div id="slider" class="nivoSlider">
439                         <img src="images/slider/slide1.jpg" alt="" title="#htmlcaption" />
440                         <img src="images/slider/slide2.jpg" alt="" title="#htmlcaption" />
441                         <img src="images/slider/slide3.jpg" alt="" title="This is an example of a caption" />
442                     </div>
443                 </div>
444                 <div id="htmlcaption" class="nivo-html-caption">
445                     <strong>This</strong> is an example of a <em>HTML</em> caption with <a href="#">a link</a
                    >.
446                 </div>
```

In order to change the captions, please edit : title="#name" where #name holds the caption content.

Themes for Nivo Slider:

You can use any skin of Nivo Slider (already included). Just replace the class name:

```
437                 <div class="slider-wrapper theme-light">
```

Change, “theme-light” to something else. You can find possible class names from here:

```
21      <link rel="stylesheet" href="stylesheets/nivoslider-themes/default/default.css" type="text/css" media="
        screen" />
22      <link rel="stylesheet" href="stylesheets/nivoslider-themes/light/light.css" type="text/css" media="screen
        " />
23      <link rel="stylesheet" href="stylesheets/nivoslider-themes/dark/dark.css" type="text/css" media="screen"
        />
```

6) SVG Components

The template is featuring some interactive SVG components, they are:

A. Milestones Show
B. Skill Diagram

These components are explained as given below:

MILESTONES SHOW:

The milestone show is integrated SVG, feed into the markup as shown below:

```
450                 <!-- SVG Starts here -->
451                 <div id="stage"></div>
452                 <!-- SVG Ends here -->
```

The SVG file can be located on the root folder as shown here:
[ROOT]/**interactive.svg**

You have to **open this SVG file inside a code-editor** and thereafter edit the color and property values inside this SVG file and they will be immediately applied to the markup.

```
52              <g id="design-details">
53                  <rect x="616.468" y="650.4" fill="none" width="187" height="68"/>
54                  <text transform="matrix(1 0 0 1 630.1738 663.6289)" fill="#fff" font-family="'LeagueGothic'"
                    font-size="22">WE CREATE LOGOS, FLYERS</text>
55                  <text transform="matrix(1 0 0 1 637.2568 685.2305)"  fill="#fff" font-family="'LeagueGothic'"
                     font-size="22">AND BRAND IDENTITIES</text>
56                  <g>
```

Please learn more about this component from the following tutorial:
http://tympanus.net/codrops/2013/02/06/interactive-infographic-with-svg-and-css-animations/

ANIMATED SKILL DIAGRAM:

The skill diagram is powered by Raphael.JS library which manipulates the skill values and renders SVG animations.

```
847                         <div class="arc">
848                             <span class="text">jQuery</span>
849                             <input type="hidden" class="percent" value="95" />
850                             <input type="hidden" class="color" value="#fff" />
851                         </div>
852                         <div class="arc">
853
854                             <span class="text">CSS3</span>
855                             <input type="hidden" class="percent" value="90" />
856                             <input type="hidden" class="color" value="#ED1B24" />
857                         </div>
858                         <div class="arc">
859                             <span class="text">HTML5</span>
860                             <input type="hidden" class="percent" value="80" />
861                             <input type="hidden" class="color" value="#84C341" />
862
863                         </div>
864                         <div class="arc">
865                             <span class="text">PHP</span>
866                             <input type="hidden" class="percent" value="83" />
867                             <input type="hidden" class="color" value="#313D6D" />
868                         </div>
869                         <div class="arc">
870                             <span class="text">MySQL</span>
871                             <input type="hidden" class="percent" value="75" />
872                             <input type="hidden" class="color" value="#6DBACC" />
873                         </div>
```

You can setup the value percentage as given here:
<input type="hidden" class="percent" value="95" />

Please learn more about this component from the following tutorial:
http://tympanus.net/codrops/2011/04/22/animated-skills-diagram/

7) Testimonial Slider

We have a simple but useful testimonials slider. Even if we call it as testimonials slider you can use it to display any HTML5 elements including images and content.

```
325                 <div id="tst1">
326                   <article class="span12 text-center">
327                       <img alt="live" title="designova live" src="images/promo-logo.png"/>
328                       <h1 class="text-center separator-caps add-bottom"><span class="bg-red">Simple &amp;
                          unique design</span></h1>
329                   </article>
330                 </div>
331                 <div id="tst2">
332                   <article class="span12 text-center">
333                       <img alt="live" title="designova live" src="images/promo-logo.png"/>
334                       <h1 class="text-center separator-caps add-bottom"><span class="bg-red">Live is an
                          amazing parallax theme</span></h1>
335                   </article>
```

Bootstrap's traditional carousel is used to build this module. This module is very easy to use and we have kept this within a common JS file:

[ROOT FOLDER]/javascripts/**script.js**

A script for initialization of this plugin is shown below:

```
176     $('#testimonials').easytabs({
177           animationSpeed: 500,
178           updateHash: false,
179           cycle: 5000
180       });
181
182      $('.tabs').easytabs({
183         animationSpeed: 300,
184         updateHash: false
185     });
```

Images, Icons & Graphics

Uniq features many images and graphical elements. We have kept such image resources in a single folder:

[ROOT FOLDER]/ **images/**

Images featured on uniq preview are not included in the download pack since they are copyrighted properties of original photographers and authors. Instead we have included exact placeholder (dummy) images with same dimensions and format. Please replace them with your preferred images, don't forget to keep exact dimensions as placeholder images.

Icon Fonts

We have not included any Icon Fonts for this theme. So this will be more easy for ordinary users to replace simple images rather than setting up a new Icon Font.

Image Credits

Images on uniQ preview are exclusive properties of original authors. Please find the theme information page (from where you bought this theme) to see image sources and credits information. If you want to use any of such images on your site you have to either purchase the original stock images or contact their authors (we are not).

Graphics / Icons Credits

We have used some Icons and created some graphics based on some icons available free over web. The sources are as follows:

http://iconmonstr.com/
http://www.tenbytwenty.com/sosa.php
